gt spaces

The ingenuity of the “gt spaces” containers lies in the division of the furniture item into three stackable compartments. These compartments each have a handle for carrying. Thus the subject of container furniture has been given a child-friendly interpretation.

For small children
The individual compartments, filled with toys for example, can be distributed in the child’s room during the day. In the evening the toys are gathered up once again and placed into the drawers and the compartments stacked on top of one another.

For schoolchildren
As children grow, the furniture can be used in conjunction with a desk. The drawers of the lower two compartments can be pulled out and offer ample space for an A4+ format. The overall container is mounted on four swivel castors and is therefore very mobile.

of which two have drawers

four swivel castors

rolling box

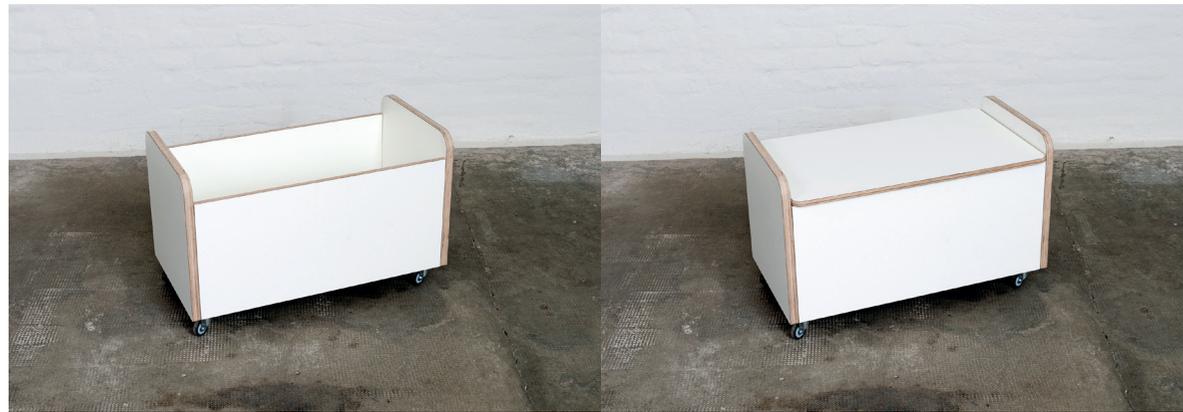

rolling box is a chest for toys and utensils of all kinds. The chest is specially developed for children and its proportions have been adapted to the children's bench that goes with growing table.

rolling box is made of HPL-coated birch multiplex and is therefore very robust. There are two lid sizes to choose from, which can both be used as surfaces to sit on.

A special feature is optional slot-in boxes with handles, of which a total of three pieces can slot into the rolling box. These are useful for storing small items such as game tokens or similar. rolling box is mounted on lockable castors with running surfaces made of rubber.

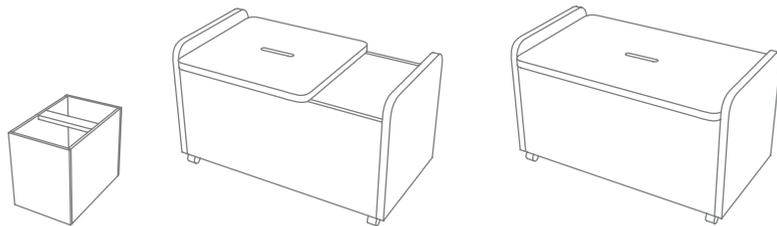

Dimensions

gt shelf

gt shelf is a simple shelf unit made of robust HPL-coated birch multiplex, which uses the same design language as growing table.

The units fit perfectly alongside one another in a horizontal arrangement or one above the other.

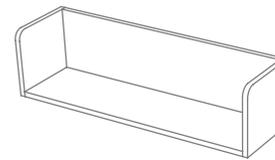

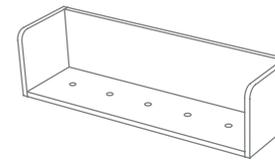

A smart feature is the optional series of holes in the base of the shelf, which holds boxes of pens or notepads as well as the bookshelf from growing table.

Dimensions

80 × 21 × 21 cm (w × h × d)
